

Management of Floodplains

This is an old version of the page

Date published: 14 December, 2015

Date superseded: 7 December, 2021

To see recent changes to this guidance, [check the bottom of this page](#).

Aim

The aim of this option is to manage stock on a newly restored floodplain (e.g. following river embankment removal). Newly restored floodplains help manage flood risk and benefit biodiversity.

By intercepting water as it overtops the river bank, floodplains will act as flood storage areas, helping to reduce the impacts of flooding downstream.

Well-managed floodplains will also support a diverse range and structure of wetland plant species which in turn will provide a food source for insects, mammals and birds.

Eligibility

Any grassland or land in arable rotation with a newly created grass sward which is allowed to flood (for example, following the removal of a flood bank), and is grazed for all or part of the year by livestock is eligible. Only the portion of the parcel of land that is liable to flooding is eligible.

Spatial targeting

[Map of target area – Management of Floodplains \(PDF, Size: 1.1 MB\)](#)

doc_external_url: https://www.ruralpaymentsandservices.org/media/resources/41_Management_of_Floodplains.pdf This option is available within the target area shown on this map.

You can check if this item is available on your holding [here](#).

Application requirements

You must identify on a map the locations of floodplain to be managed.

Management requirements

- you must manage the same location and extent each year for the duration of your contract
- you must monitor the field and remove stock when required due to flooding
- you must maintain a diary

Payment

You can claim £57.43 per hectare per year.

There is a separate capital item to support the management of floodplains:

- [River Embankment Breaching, Lowering or Removal](#)

You can support the management of stock on a floodplain with the following management option:

- [Converting Arable at Risk of Erosion or Flooding to Low-input Grassland](#)

Inspections

The inspectors will check:

- you have managed the same location and extent each year for the duration of your contract
- you have monitored the field and removed stock when required due to flooding
- you have maintained a diary

Additional guidance

[Supporting guidance is available for this option.](#)
