Aim

This option has two distinct aims.

1. To provide support for new access infrastructure that will bring small scale, undermanaged or inaccessible existing woodlands back into active management so as to:

- improve the economic value of forest and woodland through timber production
- increase the area of woodland in Scotland that is in sustainable management
- improve the environmental and social benefits of woodland

Under this aim, this option is limited to existing woodlands of up to 50 hectares in size. Woodlands over 50ha which include areas of native woodland (as shown on the Native Woodland Survey of Scotland) not producing timber may be eligible as long as the productive woodland area is less than 50ha.

2. To provide support for new access infrastructure to new woodlands as part of the Sheep and Trees initiative. This initiative is aimed at raising awareness of the many opportunities woodland can bring to land managers.

This option, as part of the Sheep and Trees grant package, is only available for upland livestock farmers when creating between 10ha and 50ha of productive conifer woodland.

Grant support

Grant support is available for a number of capital grant operations associated with new forest infrastructure.

1. Existing woodland

The capital grant operations available are:

Capital grant operation	Payment rate	Allowances
-------------------------	--------------	------------

Construction of Forest Road	£25.80 per linear metre	Up to a maximum of 1,500 metres/ application
Construction of Lay-bys, Turning Areas or Loading Bays	£6.60 per square metre	
Construction of Bell-mouth Junction	£32.40 per square metre	

2. Sheep and Trees

The capital grant operations available are:

Capital grant operation	Payment rate	Allowances
Construction of Forest Road	£25.80 per linear meter	Up to 30 metres/ha of woodland creation (cap of 1,500 metres/application)
Construction of Lay-bys, Turning Areas or Loading Bays	£6.60 per square metre	

Application eligibility criteria

For the Sheep and Trees grant package, you must be an upland livestock farmer with sheep being a key part of the farm. Land within the CSGN area is eligible for either the Central Scotland Green Network (CSGN) contribution or the forest infrastructure grant but not both grants.

Your application and proposed work must comply with the UK Forestry Standard.

You must have an approved Forest Plan for woodland areas of 100 hectares or more, unless in exceptional circumstances a Management Plan is deemed suitable.

You must conclude any relevant requirements such as Environmental Impact Assessment (EIA) or prior notification before submitting your application - see Associated permissions and approvals section below.

Land ownership

You must own or lease the land.

If you are a tenant then a landlord's declaration must be provided with your application. The control of the land must extend for the duration of the proposed contract.

[Landlord's Declaration Form \(MS Word, Size: 658.7 kB\)](#)

doc_external_url: https://www.ruralpaymentsandservices.org/media/resources/0003---landlords_declaration_form---SF-7.docx

If you are a contractual licensee then the Contractual Licence must be provided with your application. The control of the land must extend for the duration of the proposed contract.

Eligible land

For existing woodlands, you must have an approved Forest Plan for woodland areas of 100 hectares or more. For woodland areas less than 100 hectares you must have an approved Management Plan.

- [Forest Plan](#)
- [Management Plan](#)

You must have a [Felling Permission](#) linked to the Forest Plan or Management Plan, if required.

There must be planned timber production, such as thinning or small scale clear felling, over the next five years (this can include low impact silvicultural systems).

For Sheep and Trees applications for new woodland areas, you must submit the Sheep and Trees forest infrastructure template and the woodland creation supporting information template in the same application.

Access infrastructure works must conform to good forestry practice as laid out in the UK Forestry Standard and other associated best practice guidance (see technical guidance below) and you must provide a clear methodology to demonstrate this.

In particular, we will look for a methodology to demonstrate the measures that you will take to minimise the potential risk to the water environment such as diffuse pollution.

The forest road must be built from suitable material that is well graded and of sufficient strength that will not readily breakdown under the wheel loading that could then cause diffuse pollution.

You must carry out the work to the standard outlined in the specification for each item. To view the specification, click on each item in the list below. You must ensure that the completed work is maintained and is functional during the period of your contract.

For existing woodland, the construction of access routes must be appropriate and in proportion to the size of woodland and the investment. This will be limited up to 1,500 metres of forest road per application and the level of grant funding must be less than £50 per cubic metres of the timber to be harvested within the next five years.

This may mean that in small woodlands where timber volumes are small a forwarder / trailer route together with a loading bay may be more appropriate. The local woodland officer will assess the appropriateness of the proposal.

We may also ask for additional financial information to support your application where large areas of felling or timber volumes are likely.

For Sheep and Trees, the construction of access routes must be done in association with the creation of between 10ha and 50ha of productive conifer woodland and is limited to up to 30 metres per hectare planted with a cap of 1,500 metres per application.

Other eligibility criteria

Infrastructure planning and implementation normally involves significant ground disturbance and the use of heavy machinery, so careful planning is required to avoid excessive environmental impact or permanent damage. It is recommended that you seek professional advice from an experienced civil engineer with a proven track record in woodland access infrastructure.

Forest roads and quarries can have significant impacts upon the environment and your application we will assess the application under [The Forestry \(Environmental Impact Assessment\) \(Scotland\) Regulations 2017](#).

You must maintain the access infrastructure as part of the forest road network and ensure that after any harvesting activity that the access infrastructure is reinstated to the condition when it was first installed.

Associated permissions and approvals

Forest roads and quarries can have significant impacts upon the environment. Depending on the location and extent of your proposals, Scottish Forestry conservancy staff will require to assess the application under [The Forestry \(Environmental Impact Assessment\) \(Scotland\) Regulations 2017](#).

In addition, you may need to get further permission from your local planning authority. Any groundwork adjoining a public road (A, B or C categories) and up to 25 metres from the public road will require planning permission.

If your application includes the construction of forestry tracks or roads (private ways), prior notification to the local planning authority (LPA) will also be required.

You must apply to the local planning authority for a decision on whether prior approval is needed. Your application to the local authority must be accompanied by a description of the proposed work. You will need to provide us with evidence that you have followed this process.

From 1 September 2018 all new forest roads and major upgrades to forest roads in excess of 5km, or in excess of 500m on ground with a slope >25°, will require a CAR licence from SEPA.

Scottish Forestry has produced guidance on pollution control and management of surface water run-off for these specific forestry activities.

[Guidance on pollution control and management of surface water run-off for specific forestry activities \(PDF, Size: 163.5 kB\)](#)

Supporting information

We need supporting information to help us assess your proposal. You must give the details as listed below using the templates provided. Ensure that you are using the correct template for your aims.

For existing woodlands:

- brief description of the current structure of the woodland
- description of the silvicultural system(s) proposed
- breakdown of the management work expected to be carried out during the plan period
- map showing the areas of thinning and felling expected during the plan period together the proposed volume of wood to be harvested over the next 10 years
- map that clearly shows the location and type of access routes

[Forest Infrastructure – supporting information template \(MS Word, Size: 784.9 kB\)](#)

doc_external_url: https://www.ruralpaymentsandservices.org/media/resources/0010---forest-infrastructure-supp-info-template_v2---SF.doc

For sheep and trees:

- details on the infrastructure proposed
- map that clearly shows the location and type of access routes
- you will also need to submit all relevant information for woodland creation, as identified in that option

[Sheep and Trees Forest Infrastructure – supporting information template \(MS Word, Size: 665.1 kB\)](#)

[General mapping guidance for the Forestry Grant Scheme](#)

Scoring criteria

To ensure that we make the best use of the resources available in delivering the Scottish Government objectives we will assess each application using the scoring criteria for forestry options.

The criteria will be written as appropriate to each Forestry Grant Scheme option; please refer to [Scoring criteria and clearing process](#) for details.

Each option within your application must meet the threshold score to be considered for approval. In achieving the threshold score, your option must score against each criterion, except for additional benefit.

The scores will then be used as the basis for allocating funding on a competitive basis through the Forestry Grant Scheme clearing process.

Delivery of option benefits

1 POINT – for applications that meet the eligibility requirements but do not deliver any of the benefits detailed below.

3 POINTS – for applications that provide one or more of the following in addition to meeting the eligibility requirements:

- Sheep and Trees applications for woodland creation between 10 and 30 hectares

Or

- applications that deliver value for money based on the ratio of grant value versus the standing volume of timber contained within the woodland. That is:

Value of Grant ÷ Total Standing Volume*

If the above calculation results in a value between 2 and 10.

Example for 3 points

Woodland area = 5 hectares

Estimated standing volume = 125m³/ha

Grant sought for 200m of new road = £5,160

£5,160 ÷ 625m³ = 8.2

* For woodland over 50ha that is comprised of native woodland that has been excluded from the area calculation for the assessment of eligibility in respect to the maximum woodland size; the volume of standing timber in the excluded native woodland area should not be included in this calculation.

5 POINTS – for applications that meet one of the three-point criteria above and the criteria below:

- Sheep and Trees applications for woodland creation between 30 and 50 hectares

Or

- applications that improve accessibility for timber removal from a woodland where there is a plan to convert a Plantation on Ancient Woodland Sites (PAWS) to an appropriate native woodland

Or

- applications that deliver greater value for money based on the ratio of grant value versus the standing volume of timber contained within the woodland. That is:

Value of Grant ÷ Total Standing Volume*

If the above calculation results in a value between 2 and 5.

* For woodland over 50ha that is comprised of native woodland that has been excluded from the area calculation for the assessment of eligibility in respect to the maximum woodland size; the volume of standing timber in the excluded native woodland area should not be included in this calculation.

Or

- applications that recognise and actively seek to address the impact of timber transport on routes which are identified as having timber transport constraints. This may include new infrastructure that provides a link to a public highway classed as an 'agreed route' for timber transport (refer to the Timber Transport Forum 'Agreed Routes Map'), or new sections of forest road that bypass a weak section of public highway

Supplementary point – additional benefit

1 POINT – will be awarded, as an additional point, where:

- applications create or improve a timber access point (for example bell mouths) into previously undermanaged woodlands. Your application must have the support of the Local Authority Highways Department.

Or

- applications that enhance local public access opportunities

How to claim

This grant is based on a number of capital items. You must claim your capital items on the Forestry Grant Scheme manual Standard Costs Capital Item Claim Form once you have satisfactorily completed the work to the desired specification.

Grant claims must be made by the end of March of the year following their award, for example, grant claims with a 2023 year must be submitted to Scottish Forestry by the end of March 2024.

Claim forms and guidance are available on the [Claims and payments page](#).

Capital items must meet, as a minimum, the specifications detailed in the individual capital item's guidance. You must include a map of the location of the capital items with your claim.

You cannot make a claim for an area that exceeds that agreed in your contract. You must claim for the areas and / or quantities as detailed in your schedule of works.

We may inspect all the capital items you claim to ensure that you have carried out the work to the correct specification.

Recent changes

Section	Change
Scoring Criteria	For woodland over 50ha that is comprised of native woodland that has been excluded from the area calculation for the assessment of eligibility in respect to the maximum woodland size; the volume of standing timber in the excluded native woodland area should not be included in this calculation.
Aim	Woodlands over 50ha which include areas of native woodland not producing timber may be eligible as long as the productive woodland area is less than 50ha.
Associated permissions and approvals	We've added a guidance on new forest roads effective from September 2018
Grant support	We've added a maximum allowance to the road length for existing woodlands
