Aim

This option aims to improve the biodiversity, resilience, and structural diversity of even-aged woodlands in the long term.

This will be achieved through restructuring their age and species composition at the point of re-planting following felling. Restructuring Scotland's woodlands will help deliver against the outcomes in the Scottish Forestry Strategy.

There are two prescriptions for the restructuring regeneration support.

1. Restructuring regeneration which helps to deliver the UK Forestry Standard *

Restructuring regeneration which delivers the level of tree species diversity required under the UK Forestry Standard so that no more than 75 per cent of the approved felling area is allocated to a single species.

This will be assessed across either:

- the approved Forest Plan areas that you will be felling within the felling approval period (i.e. phases 1 and 2), or
- the approved Management Plan areas that you will be felling under a felling licence

Other factors will be considered when assessing applications against the UK Forestry Standard, including woodland structure, long-term retention, designed open ground, and the native species component.

Woodland officers will ensure that the level of species diversification and change is moving towards UK Forestry Standard within the restructuring regeneration area covered by the contract.

2. Restructuring regeneration which adds diversity and builds resilience *

Restructuring Regeneration which delivers species diversity that goes beyond that required by the UK Forestry Standard so that no more than 60 per cent of the approved felling area is allocated to a single species.

This will be assessed across either:

- the approved Forest Plan areas that you will be felling within the felling approval period (i.e. phases 1 and 2), or
- the approved Management Plan areas that you will be felling under a felling licence

Woodland officers will ensure that the level of species diversification and change is at least that required by the UK Forestry Standard within the restructuring regeneration area covered by the contract.

* In woodlands of less than 10 hectares and in native woods, the above proportions may be relaxed providing the adjacent land uses provide landscape and habitat diversity (see UK Forestry Standard).

Grant support

Grant support is based on the two prescriptions above. A grant for the use of improved vegetative stock for Sitka spruce is also available.

Prescription	Standard Rate (£ per hectare)
Delivering UK Forestry Standard Woodland	300
Delivering Diversity and Resilience Woodland	550

Vegetative propagation

An additional payment of £60 per hectare will be made for areas planted with Sitka spruce. The plants must have been produced by vegetative propagation from seeds derived from controlled pollinations in 'Parents of Families' in the tested category.

If you propose to use *'Sitka spruce plants produced by vegetative propagation from seeds derived from controlled pollinations in 'Parents of Families' in the tested category'* then the site must have the capacity to achieve a minimum yield class 14.

When submitting a claim for vegetative propagation Sitka spruce, or for native trees, you must provide a nursery suppliers document which states the region of provenance, the Master Certificate Number and the total number of trees used.

Application eligibility criteria

You should check that you are eligible to apply for Forestry Grant Scheme funding before progressing.

[Woodland Improvement Grant](#)

You must have an approved Forest Plan for woodland areas of 100 hectares or more. For woodland areas less than 100 hectares you must have an approved Forestry Commission Scotland Management Plan or Forest Plan.

You must have Forestry Commission Scotland approval for the area you intend to fell or have already felled through either a felling licence or Forest Plan.

[Long-term Forest Plan technical guidance](#)

[Management Plan](#)

The restructuring regeneration proposed in your application must align with the approval as stated in your Forestry Commission Scotland Management Plan or Forest Plan.

Supporting information

You must submit an operational plan which includes information on how you propose to successfully re-establish the woodland. You must give the details as listed below using the template provided.

[Woodland Improvement Grant – Restructuring Regeneration operational plan template](#)

This must clearly demonstrate silvicultural appropriateness, as well as ensuring site conditions have been thoroughly assessed and the most appropriate management techniques are proposed to minimise the impacts to the environment.

The operational plan must also include information such as ground preparation methods and identification of existing watercourses (as per Forest and Water Guidelines).

Please provide a map of the species composition of the area you propose to carry out restructuring regeneration on and details the inclusion of any planned tracks.

You must also supply a tabular breakdown of the restructuring regeneration component areas to show the species and areas you plan to replant.

Selection criteria

To ensure that we make the best use of the resources available in delivering the Scottish Government objectives, we will assess each application using selection criteria. The selection criteria will be specific to each Forestry Grant Scheme option. Each application will receive a score based on the selection criteria and we will set a minimum score for each option. We will make details available before the start of the scheme.

How to claim

Once you have completed your operations, you should submit a Forestry Grant capital claim and a map that shows the species composition of the areas you have planted.

If you claim for planting Improved Vegetative Stock for Sitka Spruce we will verify this against the nursery supplier's document you should supply as support to your claim.

You must also supply a tabular breakdown of the restructuring regeneration component areas to show the results of the completed planting operations.

Woodland Improvement Grant – Restructuring Regeneration component areas table

You cannot make a claim for an area that exceeds that agreed in your contract. You must claim for the areas as detailed in your schedule of works.

We may inspect the areas as approved within the Scottish Rural Development Programme contract and associated felling licence or Forest Plan, to ensure that you have delivered the agreed design and restructured species composition.

Amendments and variations

We understand that from time to time approved plans or licences may require amendments due to unforeseen circumstances such as windblow. It is therefore essential that prior to carrying out any works you ensure that the plan or licence associated with your application is still valid and reflects what has been approved in your contract.

If there have been any amendments to a plan or licence, which may have an impact on your approved Woodland Improvement Grant – Restructuring Regeneration contract, then you must liaise with your local office to agree any variations that may be necessary before you carry out any works.
